CAREER OBJECTIVE

Recent Bachelor of Engineering (Electronics and Communication Engineering) graduate with a strong foundation in Electric Vehicle technology, Battery Management Systems, and Embedded Systems. Completed coursework and projects in EV architecture, BMS configurations, and AI-based automation. Eager to leverage analytical abilities to develop innovative battery and EV solutions and achieve measurable performance improvements in a dynamic Electric Vehicle industry.

INTERNSHIP

Intern, VisionAstra EV Academy

2026-02-01 — 2026-06-30

- Tested and studied EV components including the Battery Management System (BMS) and motor controller, analyzing protection features and cell balancing behavior.
- Analyzed EV architecture and BMS configurations for 3+ battery pack systems, mapping cell arrangements and safety parameters to support hardware validation.
- Integrated Raspberry Pi and sensor modules to capture and log real-time performance data for EV components.
- Documented technical observations and test procedures, supporting knowledge transfer across the engineering team.
- Led an intern team at VisionAstra EV Academy, coordinating testing activities, data collection efforts, and technical documentation across team members.

EDUCATION

Bachelor of Engineering (Electronics and Communication Engineering), G Madegowda Institute of Technology, VTU

2022–2026

CGPA: 8.10/10

CERTIFICATIONS

Electric Vehicle Technology Internship, VisionAstra EV Academy

Python Programming Fundamentals,

Artificial Intelligence Fundamentals,

TECHNICAL SKILLS

Python (Basic), C (Basic), SQL, Linux, Raspberry Pi, Arduino, Sensors, Embedded C (Basic), Battery Fundamentals, Battery Management System (BMS), EV Architecture, Charging Systems, Digital Electronics, Analog Electronics, Circuit Analysis, Git, GitHub, VS Code, Power BI (Basic), MS Excel, MS Office, Problem Solving, Teamwork, Communication, Leadership, Adaptability, Quick Learner, Machine Learning, Deep Learning, Computer Vision, Image Processing, Recommendation Systems, Hardware Testing, Sensor Integration, Data Logging, Technical Documentation, Robotics, Team Leadership, Project Coordination, Motor Control

Programming: Python (Basic), C (Basic), SQL
Operating System: Linux
Embedded Systems: Raspberry Pi, Arduino, Sensors, Embedded C (Basic), Sensor Integration, Data Logging, Hardware Testing, Robotics, Motor Control
EV Technologies: Battery Fundamentals, Battery Management System (BMS), EV Architecture, Charging Systems
Electronics: Digital Electronics, Analog Electronics, Circuit Analysis
Tools: Git, GitHub, VS Code, Power BI (Basic), MS Excel, MS Office, Technical Documentation
Soft Skills: Problem Solving, Teamwork, Communication, Leadership, Adaptability, Quick Learner, Team Leadership, Project Coordination
AI & Machine Learning: Machine Learning, Deep Learning, Computer Vision, Image Processing, Recommendation Systems

PROJECTS

Smart Waste Segregation Robot using CNN and Raspberry Pi

- Developed an AI-based waste segregation system using Raspberry Pi, Python and CNN.

- Classified Plastic, Paper and Organic waste using image processing.
- Automated waste sorting using a robotic arm.
- Improved classification accuracy through model training and testing.

AI Trip Planner and Travel Recommendation System

- Developed a travel recommendation application in Python that generates personalized itineraries by matching user preferences to destinations, hotels, and transportation options.
- Tailored trip recommendations to user preferences, delivering customized destination, hotel, and transportation options.
- Presented personalized destination, hotel, and transportation options to simplify trip planning and comparison for end users.

LANGUAGES

English, Kannada, Hindi
