CAREER OBJECTIVE

Embedded Hardware Engineer with hands-on experience in electronics, circuit analysis, and hardware testing and validation from a Bachelor of Engineering in Electronics and Communication. Skilled in Raspberry Pi, Arduino, and Python with a demonstrated ability to design and validate embedded systems — including Battery Management Systems and motor control — resulting in reliable, repeatable test procedures for EV components.

INTERNSHIP

Intern – VisionAstra EV Academy *2026-02-01 – 2026-06-30* | *Bengaluru, Karnataka*

- Tested and validated EV components — including the Battery Management System (BMS) and motor controller — assessing protection features and cell-balancing behavior across multiple operating conditions.
- Mapped cell arrangements and safety parameters across 3+ battery pack systems to support hardware validation and design verification.
- Built a Raspberry Pi-based data acquisition setup with sensor modules to capture and log real-time performance data for EV components.
- Authored technical test procedures and observation reports, enabling repeatable testing and knowledge transfer across the engineering team.
- Led a team of interns, coordinating test execution, data collection, and documentation to deliver consistent validation results.

EDUCATION

G Madegowda Institute of Technology, VTU – Mandya, Karnataka *2026*

Bachelor of Engineering (Electronics and Communication Engineering)

CGPA: 8.10/10

CERTIFICATIONS

Electric Vehicle Technology Internship – VisionAstra EV Academy

Python Programming Fundamentals – NPTEL

Artificial Intelligence Fundamentals – NPTEL

TECHNICAL SKILLS

Programming: Python (Basic), C (Basic), SQL

Operating System: Linux

Embedded Systems: Raspberry Pi, Arduino, Sensors, Embedded C (Basic), Data Logging, Hardware Testing, Motor Control

EV Technologies: Battery Fundamentals, Battery Management System (BMS), EV Architecture, Charging Systems

Electronics: Digital Electronics, Analog Electronics, Circuit Analysis

Tools: Git, GitHub, VS Code, Power BI (Basic), MS Excel, MS Office, Technical Documentation

Soft Skills: Problem Solving, Teamwork, Communication, Leadership, Adaptability, Quick Learner, Team Leadership, Project Coordination

AI & Machine Learning: Computer Vision, Image Processing

PROJECTS

Smart Waste Segregation Robot using CNN and Raspberry Pi *2026-01-01 – 2026-03-31*

- Developed an AI-based waste segregation system using Raspberry Pi, Python, and a CNN trained on 1,500+ labeled images.
- Classified Plastic, Paper, and Organic waste using image processing with the trained CNN model.
- Automated waste sorting using a robotic arm driven by the classification output.
- Refined model performance through iterative training and testing on labeled image datasets.

AI Trip Planner and Travel Recommendation System

- Developed a travel recommendation application in Python that generates personalized itineraries by matching user preferences to destinations, hotels, and transportation options.

- Implemented preference-matching logic to rank and recommend travel options, simplifying trip planning and comparison for end users.

LANGUAGES

English (Professional), Kannada (Native), Hindi (Professional)
